About Talga

Talga Resources Ltd (“Talga”) (ASX: TLG) is an advanced materials company with patent pending technology to produce industrialised supply of graphene and micrographite sourced from its 100% owned natural graphite ore deposits in Sweden. Talga’s unique deposits and proprietary processes provide a potential path to high quality production that overcomes cost and volume barriers to supply, thereby unlocking commercial applications. Micrographite as well as graphene platelets are being manufactured for industry partners at Talga’s German pilot scale test-work facility.

The Company’s processing technique relies on Talga’s unique natural source and bypasses the need for traditional milling. Pristine particle morphology is maintained and significant operational and capital expenditure benefits are anticipated. Talga has the opportunity to be a global leader with respect to pricing, volume and quality of graphitic advanced materials in key sectors like construction, coatings, energy and composites.
